

Law enforcement
through digital
transformation

› ICE Enforcement

is a carefully crafted digital suite of law enforcement tools. These equip law enforcement professionals with modern mobile tools, enabling central system integration and law enforcement using technology.

› Law Enforcement Through Digital Transformation

ICE Enforcement is a carefully crafted digital suite of law enforcement tools.

These equip law enforcement professionals with modern mobile tools, enabling central system integration and law enforcement using technology.

This approach ensures that the infringement is issued legally and can be tracked until the case is successfully and legally concluded.

Law enforcement is elevated to a professional and reputable service using the ICE Enforcement platform.

› Key Features and Benefits

ICE Enforcement provides officers and government agencies with tangible touch points to implement law enforcement practice and manage activities to lower infringement statistics and improve the lives of citizens.

- **Accident management:** Centralised data capture and storage of infringement data for analysis
- **Law enforcement management:** Combats the occurrence of infringements and lowers incidence levels
- **Monitor activities:** Modern master control centre technology provides law enforcement officers with the tools to focus their attention where it is needed
- **Administrative functions:** Infringement event capturing technology supports law enforcement agencies in improving their proficiency

> Key Capabilities

Law Enforcement Technology

The ICE Enforcement module was developed to digitally empower law enforcement professionals to enhance their policing value and better secure the everyday life of the citizen. Its enterprise-level architecture integrates with other government agencies' systems and unifies law enforcement relevant data into a single, centralised system.

Officers are able to more efficiently:

- Access current, accurate data as and when they need it
- Capture infringements at the event inception
- Digitally issue, manage and finalise fines
- Ensure peace of mind and maintain an accurate account of events as entire processes are fully audited
- Secure revenue collection and prevent revenue leakage

› Law enforcement is elevated to a professional and reputable service using the ICE Enforcement platform.

> Mobile Apps

The process of data capturing is simple and effective with the use of mobile apps and mobile devices. Officers can quickly and accurately issue, capture and share infringement notices and infringement-related particulars.

Infringement Management

- Issuing various traffic-related fines
- Fines for by-law offences
- Fines issued by police officers other than traffic fines
- Speeding fines
- Payment collection via built-in card point-of-sale (POS)
- Vehicle-related fines including defects, etc.
- Camera infringements

Accident Management

- Capturing accident details at the scene of an accident
- Issuing an accident case reference number
- Verifying driver and vehicle details

> Holistic Law Enforcement

ICE Enforcement helps those who represent the government do so with integrity:

- Officer positions verifiable
- Officer activity monitored and assessed

› Mobile Roadblocks and Checkpoints

ICE Enforcement facilitates the orderly and effective set-up and operation of a mobile checkpoint/roadblock:

- Mobile automatic number plate recognition (ANPR) cameras automate the identification and classification of vehicles
- Officers can retrieve vehicle and driver details from the national database via mobile technology
- Officers will have the correct data to enforce the administering of fines or fines collection roadside

› Data Collection and Analytics

ICE Enforcements world-class data-processing facility helps secure a successful and credible infringement conviction rate.

The system employs incoming data (listed below), which affects the lawful issue of a notice infringement supported by reliable irrefutable evidence of the infringement:

- Reviews of collected video and still images to verify the infringement
- Prepares visual media as evidentiary support
- Collates the information relevant to the date, time, and details of the perpetrator
- Confirms the legal basis for the infringement per act and section of the law
- Maintains the national record of infringements ensuring up-to-date information is on hand
